

Clean Architecture

The value of **domain-centric** architectures

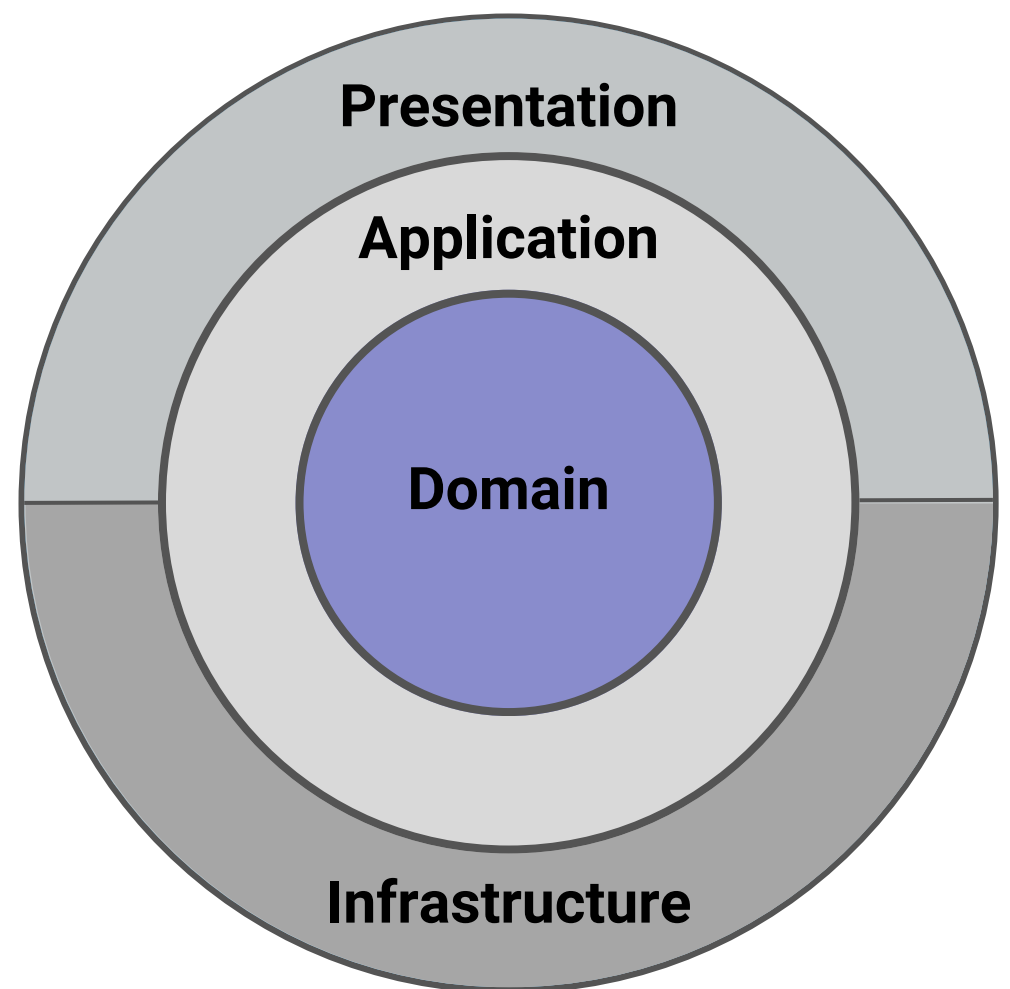

@MilanJovanović

SWIPE >>>

1. Domain

Contains the **core business rules** & logic

- **Entities**
- **Value objects**
- **Domain services**
- **Domain events**
- **Enumerations**
- **Factories**
- **Custom exceptions**
- **Repository interfaces**

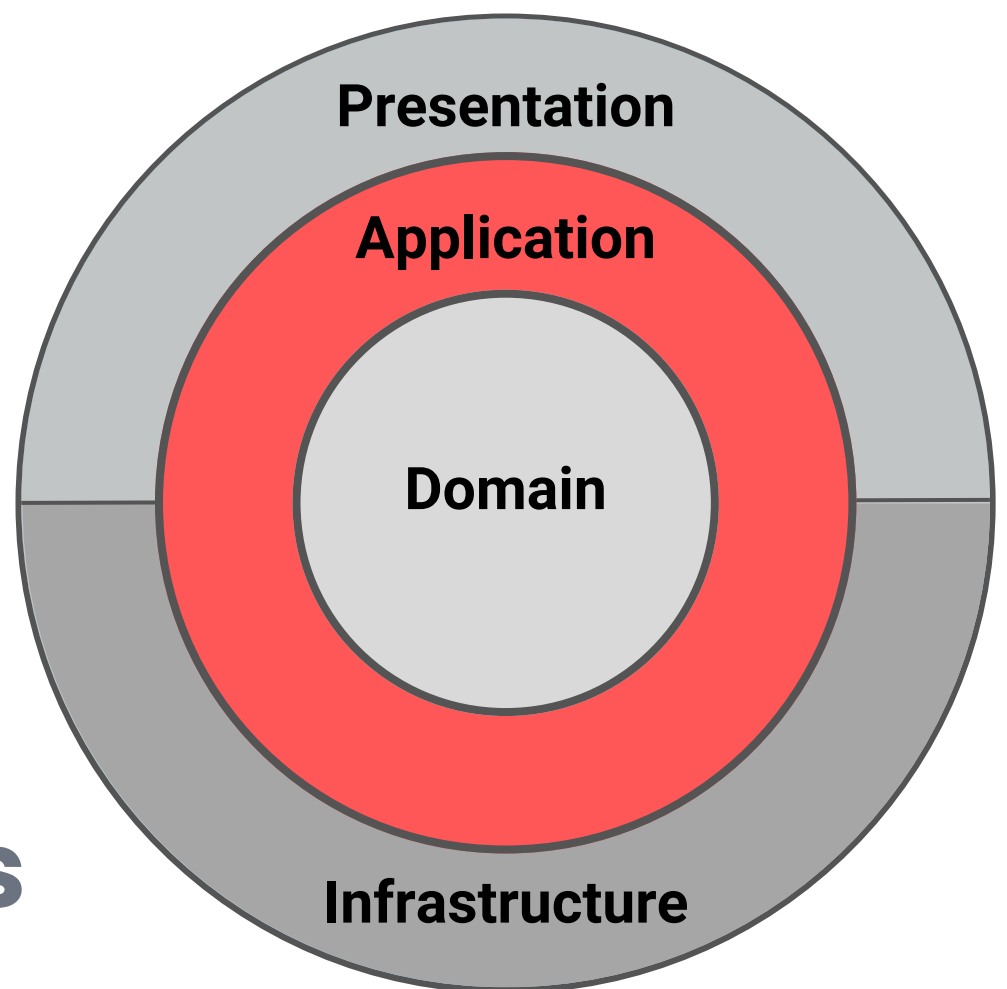

@MilanJovanović

SWIPE >>>

2. Application

Contains the application **use cases**

- **Use cases**
- **Commands**
- **Queries**
- **External interfaces**
- **Custom exceptions**
- **Application services**

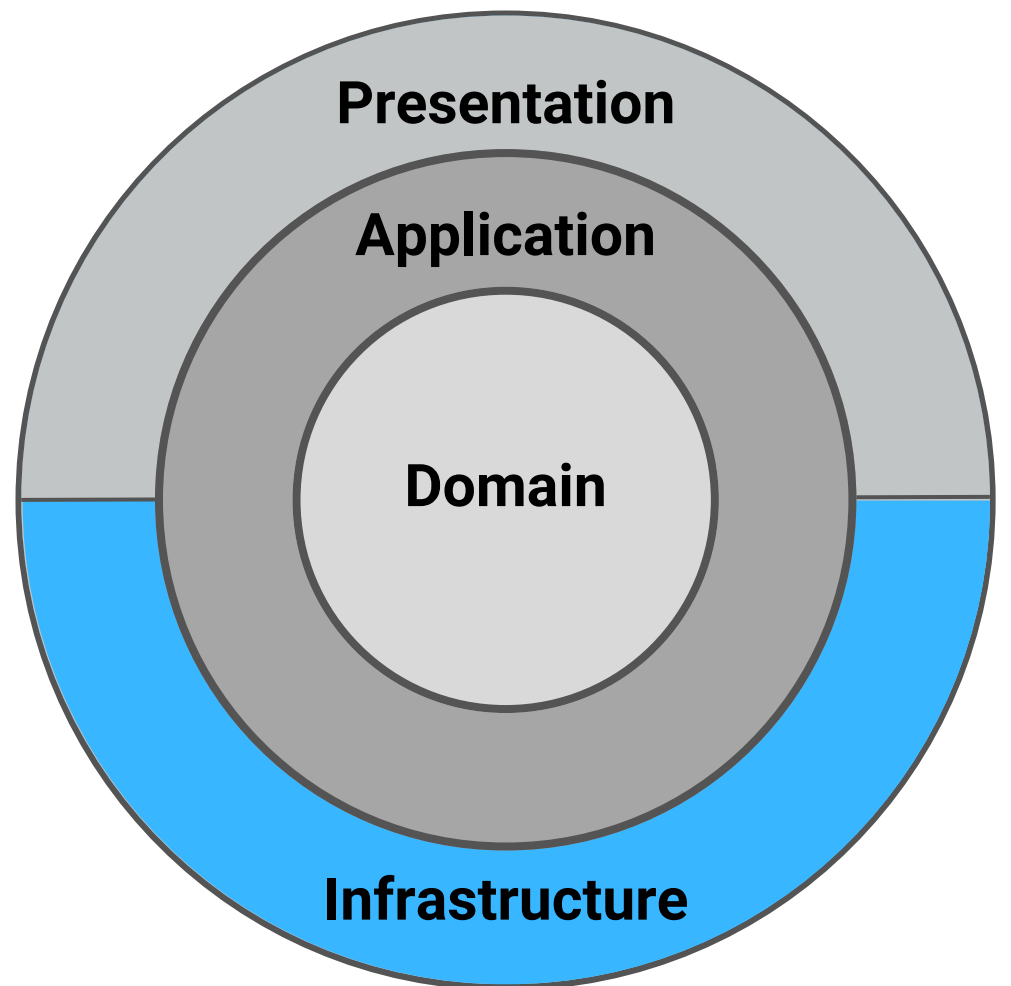

@MilanJovanović

SWIPE >>>

3. Infrastructure

Contains any **external concerns**

- **Databases**
- **HTTP Clients**
- **Cloud storage**
- **Message brokers**
- **Identity providers**

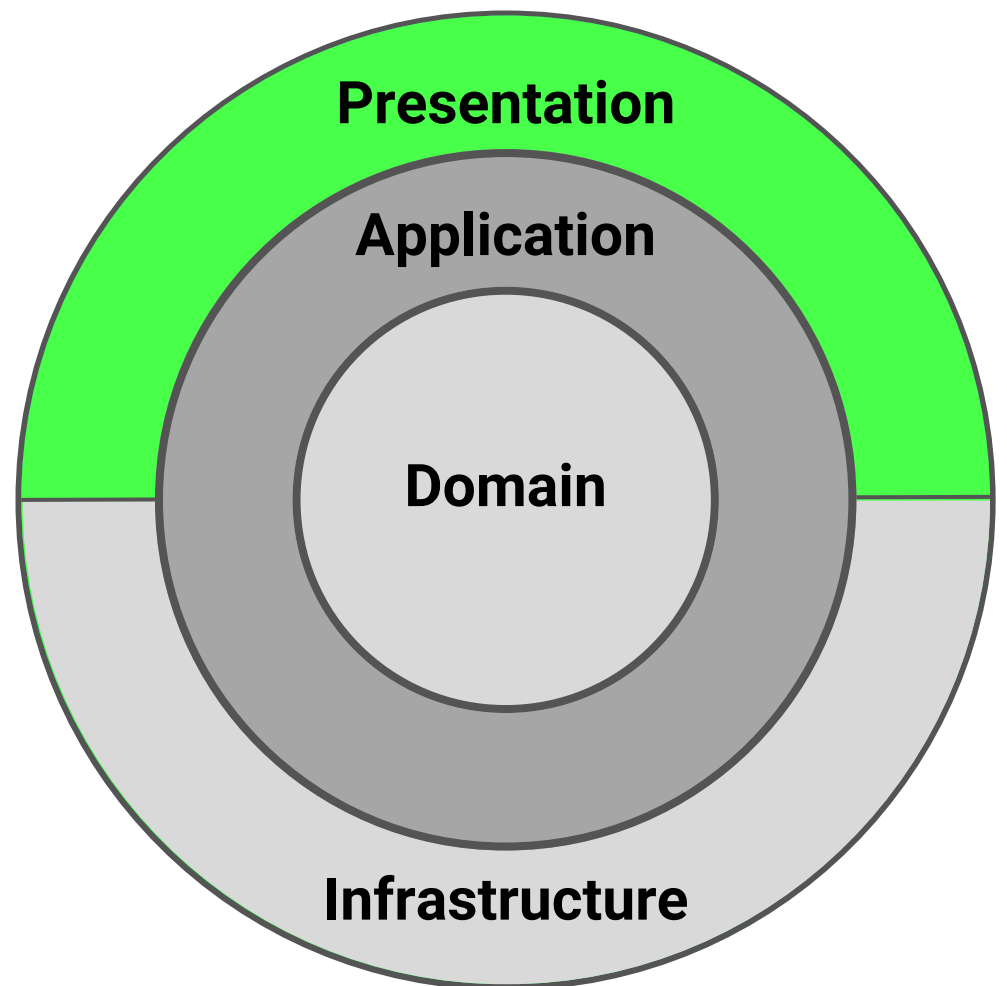

@MilanJovanović

SWIPE >>>

4. Presentation

Represents the **entry point** to the system

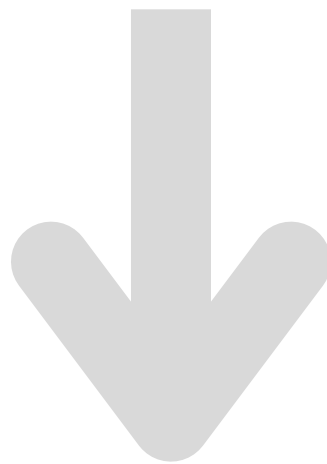

- Exposes public API
- REST API
 - ASP.NET Core
- gRPC
- GraphQL
